### eComponents Technology - Leaders in Enterprise Energy Management

Now more than ever, CEOs, facility managers, energy companies, and engineers are faced with the challenges of reducing the cost of energy and water consumption.

At eComponents Technology, we understand that the first step to reducing costs and conserving energy begins with reliable tracking and measurement tools.

We have more than 15 years of proven experience providing reliable and results-driven energy information systems.

**Our clients** - 5-star hotels, universities, state and federal governments, banks, military bases - are all seeing the benefits of our software in their bottom line.

### Global Challenges - Onsite Solutions

eComponents Technology is helping organizations in more than 50 countries around the world reduce energy consumption, energy costs, and greenhouse gas emissions.

**Our software packages** - designed for commercial, institutional, and industrial facilities - are especially well-suited for organizations with multiple facilities and multiple locations.

Our energy management and environmental reporting systems help you:

- > Measure, track and analyze energy performance.
- > Establish benchmarks and performance standards.
- > Monitor and report greenhouse gas emissions.
- > Allocate energy costs to operating units and tenants.
- > Forecast energy supply needs.
- > Support energy purchasing programs.
- > Verify savings of energy efficiency programs.
- > Analyze and verify utility bills.

### We Help You Choose the Package that is Right for You

- > Our hosted energy management service is easy to use and does not require the purchase of computer hardware or the installation of software. We guarantee the privacy and security of your data. Our secure data center has built in redundancy and is monitored 24x7.
- > Alternatively, the entire software package can be hosted on your own system (turn-key). We have the hardware to make that happen, and it comes with the same great quality and customer service.
